

# Bet Mirror Pro

---

**Institutional-Grade Prediction Market Automation**

Non-Custodial. AI-Powered. 24/7 Cloud Execution.

# The Critical Barriers to Prediction Market Participation:

## 1 Custodial Risk

Traditional trading bots require users to hand over private keys or API credentials. Whilst prediction markets do not yet have non-custodial institutional grade terminals. This is a non-starter for serious capital.

## 2 Complexity & Barrier to Entry

Effective participation requires constant, 24/7 monitoring of the Central Limit Order Book (CLOB) and deep technical knowledge to execute trades atomically.

## 3 Alpha Overload

New Traders are overwhelmed by scattered information and the need to manually identify or craft high-win-rate betting strategies.

## Bet Mirror Pro: Non-Custodial Automation for Prediction Markets

Bet Mirror Pro is the first institutional-grade non-custodial platform that enables you to deploy your own 24/7 Polymarket copy trading bot. It leverages [Account Abstraction \(ERC-4337\)](#) and a proxy Polygon Smart Wallet to solve custodial risk, ensuring the bot can only sign trade transactions.

### Security First

Funds are held in a user-controlled Smart Contract (ZeroDev Kernel).

### Autonomous Execution

A 24/7 cloud-based bot executes trades using restricted Session Keys.

### Alpha Generation

One-click copy trading from a curated Alpha Registry of top performers.

# The Confluence of Technology and Market Demand

**Prediction Markets Exploding**

The sector is experiencing exponential growth. The market is primed for a professional intelligence layer.

**Account Abstraction Maturity**

ERC-4337 and Smart Accounts are now production-ready, enabling true non-custodial automation.

**Demand for Active Intelligence**

Traders demand solutions that actively discover, analyze, and monetize opportunities autonomously.

**First-Mover Advantage**

We are the first to deploy ERC-4337 to eliminate custodial risk in prediction market trading.

Platform/Market	Metric	Value	Timeframe
Overall Prediction Markets	Weekly Trading Volume	\$1.54 billion	Sept. 22-28, 2025
Polymarket	Monthly Volume	Over \$1 billion	Recent (Q3 2025)
Kalshi	Monthly Volume	Over \$2 billion	October 2025
Robinhood Prediction Markets	Contracts Traded	4 billion	Q3 2025 (from zero in under a year)
Limitless	Total Trading Volume	Over \$400 million	As of October 2025 (including \$100 million in last 3 weeks)
MyriadMarkets (on AbstractChain)	USDC Traded Growth	4x increase	Past 4 months (June–October 2025)
Distributed Prediction Industry (Projection)	Market Size	\$95.5 billion	By 2035 (CAGR implied ~20–25%)

**Our Position**

Bet Mirror is positioned as the institutional-grade terminal combining Account Abstraction security with AI and copy trading power. Immediate integration with PredictBase to expand beyond Polymarket.

## How It Works: The 3-Step Flow

1

### Smart Onboarding

Connect your wallet and instantly deploy a non-custodial Smart Account (Proxy Wallet) on Polygon.

2

### Fund & Configure

Fund your Smart Account using our cross-chain bridge and configure your risk tolerance and strategy.

3

### Passive Alpha

Select a top trader from the Alpha Registry and click "Copy." Our cloud engine executes trades 24/7.

---

*Real-time monitoring and execution dashboard available throughout the entire process.*

# Unlocking Institutional Security: The ERC-4337 Advantage

Technology	Function	Security Benefit
 ZeroDev Kernel	Holds user funds on Polygon.	Non-Custodial: User retains admin keys; funds always safe.
 Session Keys	Grants bot permission to sign specific trade transactions only.	Permissionless: Bot blocked from withdrawing funds.
 AI Guardrails	Gemini 2.5 AI reviews every trade signal against risk profile.	Risk Mitigation: Intelligent layer before execution.
 Gas Abstraction	Smart Accounts handle gas optimization and payment.	Seamless UX: No need to manage native tokens for gas.

## Best Non-Custodial Wallets to Consider

Electrum

Exodus

Zengo

Ledger Nano X

TREZOR One

Wasabi

Phantom

Meta Mask

# Automate Alpha: A Full-Stack Trading Terminal

## ◆ Alpha Registry

Leaderboard of high-win-rate traders for one-click copy trading.

## ◆ 24/7 Cloud Execution

Node.js engine monitors the CLOB and executes trades continuously, even when offline.

## ◆ Cross-Chain Bridge

Li.Fi integration allows instant funding from any major chain (Solana, Base, Ethereum, etc.).

## ◆ Auto-Cashout

Secure profits automatically by sweeping balances above a set threshold back to a cold wallet every 15 minutes.

## ◆ Mobile Optimized

Fully responsive design with SMS Notifications (Twilio) for PnL monitoring.

## ADVANCED AUTOMATION

### ☐ Auto-Cashout Profits

Automatically sweeps funds above the retention limit to your cold wallet.

### ☐ SMS Notifications

# The Agent Advantage: From Manual Trader to Portfolio Manager

Feature	Manual Trading	Traditional Bots	Bet Mirror Pro
Custody	Non-Custodial	Custodial	✓ Non-Custodial
Execution	Manual, 24/7	Automated	✓ Automated 24/7
Risk Control	Manual	Basic	✓ AI Guardrails
Alpha Source	Self-Research	Self-Coded	✓ Alpha Registry
Cross-Chain	Manual Bridge	N/A	✓ Li.Fi Integrated

# Tapping the Active Intelligence Layer of Prediction Markets

The true opportunity lies not just in the trading volume, but in the **Active Intelligence Layer** required to monetize it. We are building the infrastructure for the next generation of automated prediction market participation.

## Target Market

High-volume traders and institutional participants seeking autonomous, secure alpha generation without custodial risk.

## Intelligence Gap

The market is demanding an Active Intelligence Layer that every serious trader will need to stay competitive in the 24/7 prediction market ecosystem.

# Performance-Aligned Revenue: We Only Win When Our Users Win

Bet Mirror Pro operates on a simple, performance-aligned business model that ensures the platform, the alpha providers, and the users are all incentivized for success.

## Revenue Source

**1% Fee** charged only on **Net Profit** generated by the bot.

## Incentive Alignment

This 1% fee is paid directly to the "mirror" (the copied trader) in the Alpha Registry. Attracts and retains the highest-performing traders.

## Scalability

Revenue scales directly with user profitability and market volume. Growth is organic and sustainable.

# Technology Stack

Built on Modern Web3 Infrastructure

Component	Technology	Purpose
Smart Account	ZeroDev Kernel v3.1, ERC-4337	Non-custodial security and gas abstraction for institutional-grade fund management.
Blockchain	Polygon (L2)	Low-cost, high-speed execution layer for Polymarket contracts and real-time trading.
Cloud Engine	Node.js, MongoDB	24/7 execution, persistence, and real-time data handling for autonomous trading operations.
Cross-Chain	Li.Fi SDK	Instant, secure funding from any major EVM and non-EVM chains (Solana, Base, Ethereum, etc.).
AI Guardrail	Google Gemini 2.5 Agent	Pre-trade risk analysis and signal validation to ensure trades align with user risk profile.
Data Source	Polymarket Data API	Real-time analytics and market data for the Alpha Registry and trading signals.

# Strategic Timeline: From Launch to Multi-Market Arbitrage

Q4 2025

December

## Product Launch

- Product launch on Polymarket
- Product scaling across blockchain communities
- Integration of additional marketplaces (PredictBase, etc.)

Strategic Focus

Establish core product and initial user base on Polygon/Polymarket

Q1 2026

January - March

## Version 2 Launch

- Introduction of AI trading signals
- Arbitrage detection and execution
- Version 1 mobile app launch
- Continued marketplace integrations

Strategic Focus

Expand product capabilities and accessibility

Q2 2026

April - June

## Strategic Review

- Comprehensive roadmap review
- Pitchdeck update and refinement
- Strategic planning for next phase

Strategic Focus

Evaluate progress and plan next growth phase

# Vision & Technical Leadership: Building the Future of Decentralized Automation

## Adonis - Visionary Lead

### CEO - Product & Strategy

Deep understanding of prediction market dynamics and user needs. Drives the product strategy to solve the custodial risk problem for institutional users. Brings market-validated problem identification and solution design expertise to Bet Mirror Pro.

## Undoxxed - Technical Architect

### CTO & Lead Developer

Indie hacker. Expertise in full-stack architecture, financial systems, cloud computing, and advanced AI integrations. Implemented the [ERC-4337 standard](#) with ZeroDev Kernel for non-custodial security compatible with CLOB. Builds scalable, production-ready systems.

## Combined Expertise

- |  |   |
|--|---|
| ✓ Market-validated problem identification and <a href="#">custodial risk solutions</a> | ✓ Product strategy and <a href="#">community-driven growth</a> vision |
| ✓ Deep understanding of <a href="#">prediction market dynamics and APIS</a>            | ✓ Implementation of <a href="#">ERC-4337</a> and ZeroDev Kernel       |
